

PRADEEP KUMAR GUPTA

Cloud and DevOps Engineer

Gurugram, India | +91 8604932809 | impradeepkumargupta@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

DevOps Engineer with 3+ years of experience designing, implementing, and maintaining cloud solutions across Kubernetes environments. Skilled in deploying and supporting containerized applications, building CI/CD pipelines for automated build, test, and release, and applying Infrastructure-as-Code (Terraform, Ansible) for provisioning and configuration management. Google Cloud Certified Professional Cloud Architect with hands-on experience in platform reliability, observability (ELK Stack, Grafana, Zabbix), Linux (RHEL) administration, and DevSecOps practices; proven track record supporting large-scale cloud migrations and cost optimization.

TECHNICAL SKILLS

Containers & Orchestration: Kubernetes, Docker, Docker Compose, Docker Swarm, Application Deployment

Cloud Platform: Google Cloud Platform (GCP) — GKE, Compute Engine, Cloud SQL, Pub/Sub, BigQuery, Cloud Functions, Cloud Monitoring

DevOps / CI-CD & IaC: GitHub, Git, GitOps (Basic), Terraform.

Observability & Monitoring: Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Zabbix, Alerting, Incident Analysis

Scripting & Linux: Python, Bash/Shell Scripting, RHEL Administration, Networking, Troubleshooting

Security & Compliance: DevSecOps Practices, Security Validation in CI/CD, Deployment Standardization

PROFESSIONAL EXPERIENCE

DevOps Engineer — Ericsson

Feb 2023 – Present

Gurugram, India

- Designed, implemented, and maintained cloud automation solutions across production-grade Kubernetes clusters on GKE, improving workload scalability, resilience, and deployment reliability.
- Deployed, configured, and supported containerized applications using Kubernetes and Docker, streamlining application delivery in collaboration with development and architecture teams.
- Developed and managed CI/CD pipelines using GitHub and Git-based workflows to automate build, test, and deployment for Java and Python applications.
- Automated infrastructure provisioning and configuration management using Terraform and Ansible, and orchestrated multi-container deployments with Docker Compose and Docker Swarm.
- Built centralized monitoring, alerting, and logging using ELK Stack, Grafana, and Zabbix, supporting platform reliability and performance optimization initiatives.
- Automated operational workflows using Python and Bash scripting, reducing manual toil and improving deployment efficiency.
- Administered Linux (RHEL) systems and networking: process/package management, filesystem optimization, permissions, and troubleshooting.
- Applied DevSecOps and security/compliance principles — security validation, deployment standardization, and continuous improvement across CI/CD workflows.
- Worked extensively with GCP cloud-native services: GKE, Compute Engine, Cloud SQL, Cloud Storage, Pub/Sub, BigQuery, Cloud Functions, and Cloud Monitoring.
- Reduced cloud infrastructure costs by ~30% through resource optimization, autoscaling, and monitoring-driven improvements.
- Contributed to migrating 200+ virtual machines from Kyndryl infrastructure to GCP with minimal downtime and improved platform stability.

PROJECT — MITO (MANAGEMENT OF IT OPERATIONS)

- Built CI/CD pipelines using GitHub to automate build, validation, and deployment workflows.
- Deployed and orchestrated containerized microservices using Docker and Kubernetes.
- Implemented centralized monitoring/logging using ELK Stack, Grafana, and Zabbix for proactive incident detection and operational visibility.

CERTIFICATIONS

Google Cloud – Professional Cloud Architect — [Credential Verification](#)

EDUCATION

B. Tech, Computer Science and Engineering — Vellore Institute of Technology (VIT), India 2019 – 2023

High School — Tilottama Higher Secondary School, Nepal 2017 – 2019

ACHIEVEMENTS

- COMPEX Merit Scholarship — All Nepal Rank 66. Full scholarship awarded by the Embassy of India, Nepal for undergraduate studies in India.
